

Summer Internship Vacancy

Nanogirl Labs Ltd is a social enterprise committed to creating engaging and educational ways for the public to engage with science and engineering.

Our research and development team is looking for a highly motivated student to join us for a fixed-term summer internship role based at our Auckland office in Ponsonby.

We are looking for students studying science or engineering with experience in building and designing basic electronic circuits. Ideally the candidate will have experience using conductive threads and sewing different electronics into soft fabrics however this is not essential.

Students must have completed their 2nd or 3rd year at a New Zealand University or Polytechnic and this internship qualifies as formal industry placement for those requiring it for graduation. As a mission driven company, we are looking for applicants with a passion for helping others especially those in hard-to-reach communities.

This is a paid internship funded by a Callaghan Innovation R&D experience grant.

At the end of the placement we hope that the successful student will:

- Use this opportunity to help satisfy their industry placement degree requirements
- Be self-motivated and able to work unsupervised
- Be interested in taking a product from concept through to prototype.
- Have an interest in learning about the commercialisation process
- Be passionate about helping the public to learn about science and engineering

Don't delay - this is a rare opportunity to join a great team and gain invaluable knowledge and skills!

To apply please send your CV and cover letter to info@nanogirllabs.com
